

Contents:

- Neoprene board
- 54 frogs divided into three different colors of 20 each

Object of the game: Be the last player to jump a frog. It doesn't matter if the frog you jump is your own or an opponent's.

Setup: Each player selects a color of frog. Players take turns placing their frogs one at a time on a white square until all 36 squares are filled up. There can be only one frog at a time on a white square.

Playing the game: Play begins after all the white squares are filled with frogs. The first player to jump is the first one to have placed a frog on the board. *Players on their first turn, and only on their first turn before jumping can remove one frog from the board. The frog removed can be any frog.*

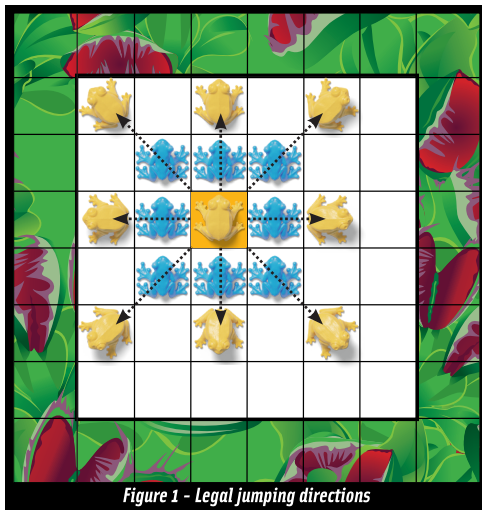

Figure 1 - Legal jumping directions

Playing the game: Jumping

Rules: Frogs can move only by jumping over another frog, either one of the same color or an opponent's frog. Jumps can be in any direction onto an empty square (forwards, backwards, sideways, or diagonally). Once a frog has been jumped, remove it from the board.

Figure 1 shows the legal jumping directions.

Illegal jumps: There are three types of illegal jumps that a frog cannot make as shown in Figure 2:

1. Jumping more than one square at a time.
2. Jumping onto an occupied square.
3. Not jumping in a straight line.

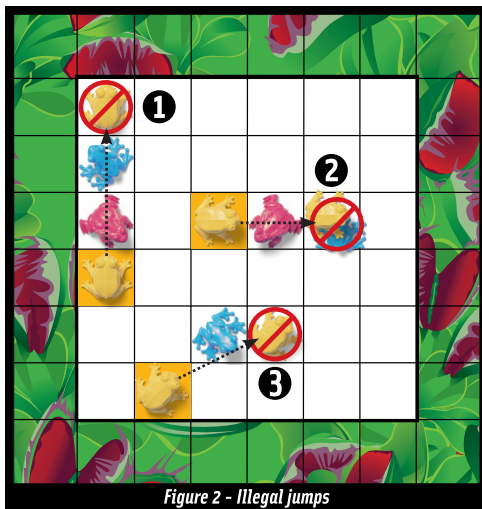

Figure 2 - Illegal jumps

WARNING

CHOKING HAZARD— Small

frogs are not for children 3 years and under or for individuals who tend to place inedible objects in their mouths.

Multiple jumps: A frog can make multiple jumps over any frog including their own. All frogs jumped are removed.

Figures 3 shows a player making multiple jumps in one turn.

***Strategy tip:** Sometimes it is necessary to jump your own frogs to win the game. Figure 3 shows an example of the yellow player sacrificing two of their frogs in order to win the game.*

Swamp

The green squares around the play area of the board are the swamp. Frogs can jump in and out of the swamp on their turn as long as there is a frog to jump over back onto an empty white square, but any frog ending its turn in the swamp is removed from the board.

Figure 4a shows a yellow frog jumping over a blue frog into the swamp with no way to jump back out. The yellow frog cannot rejoin the game and is removed from the board.

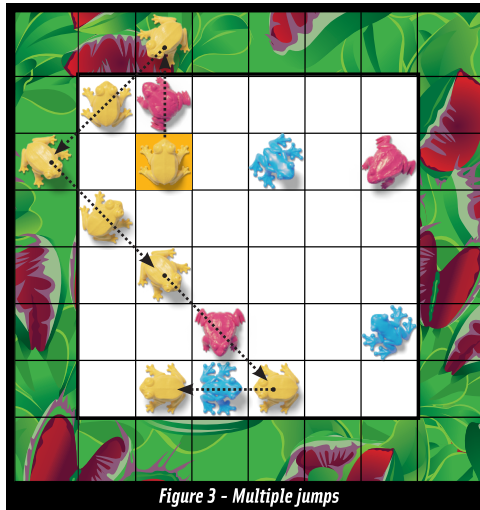

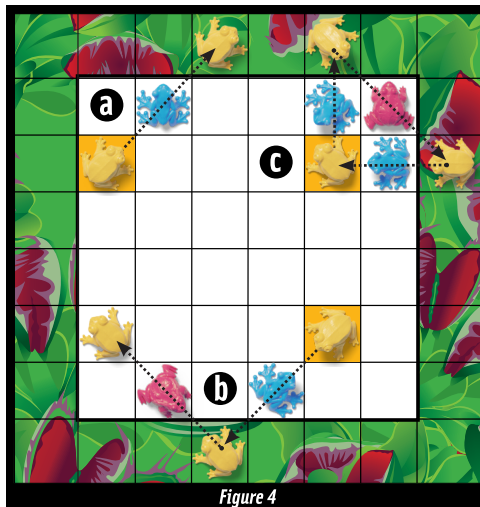

Figure 4b shows a yellow frog jumping over a blue frog into the swamp and immediately jumping a red frog back onto an empty white square. Because the yellow frog could jump immediately back onto the board, it saved itself and stayed in the game.

Figure 4c shows how a frog may jump into the swamp and then back out onto the same space.

End of game

The game ends when there are no legal jumps remaining for any of the players on the board. If there are three players and one player is unable to jump, the player is eliminated from the game. However, their frogs stay on the board. The last player to jump a frog wins.
